Beagle™ Haunting True Beauty.. Professional

G-Q7 Q-Switched Nd:YAG

Quick Effective Affordable

G-Q7

Introduction

The Q-switched Nd-YAG is the most frequently used laser for tattoo removal. During treatment, with a photo-thermal effect, pulses of light from the laser are directed to break up the tattoo pigment into tiny particles with high peek energy. Also, the tiny freckles are easily removed by the body's natural filtering system.

Features

- Strong power output, high efficiency
- High and new laser technology - instantaneous explosion
- Short treatment period with higher treatment efficacy
- Easy to administer, simple to switch between wavelengths
- No damage to hair follicle, no damage to ordinary skin & no scarring

Indications

- Q- Switched 1064nm: ota, coffee spot, freckles, age spots, traumatic pigmentation, black, blue, brown tattoo, eye line & lip line tattoo pigment.
- Q-Switched 532nm: shallow red and brown skin color of pigmented lesions, red spot & mole, cappillarectasis, hemangioma, brandy nose, etc.

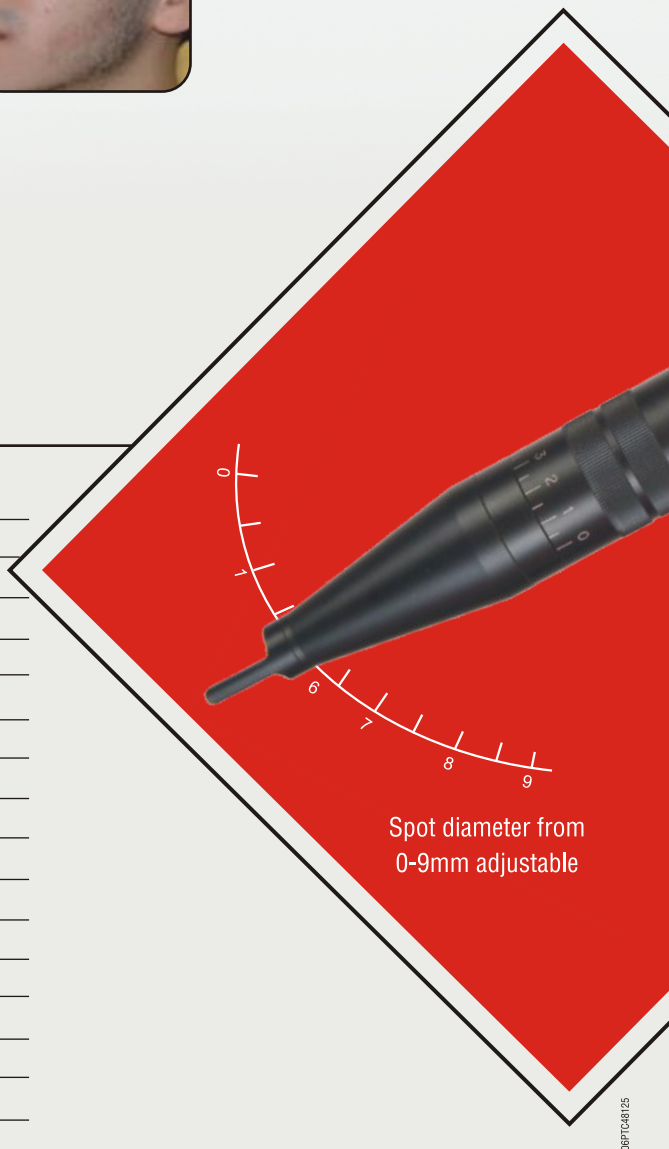
Technical Specification

Laser wavelength	1064 nm:532nm
Source	Nd: YAG
Max energy	800mJ@1064 nm
	320mJ@532nm
Pulse duration	⩽10 ns
Repetition rate	1064nm: 1,2,3,5,10Hz
	532nm: 1,2,3Hz
Beam delivery	7- joint spring – balanced articulated arm
Output power	2500W
Display	LCD display
Cooling system	Water and air cooling (best radiator, best cooling)
Tips	1064nm: 532nm treating head
Working environment	5-400c
Working humidity	⩽80%
Platform specification	
Electric	AC110V/ 220V ± 10%, 50/60Hz
Gross weight	123kg
Dimensions	98 x 45 x 113



Spot diameter from
0-9mm adjustable

CIN NO. U24246GJ2006PTC048125
